

iLearn DWS Academy™

Developed in partnership with iLearnERP, the **iLearn DWS Academy™** is exclusively available to customers of DWS and offers a comprehensive range of product training modules for users of our Dimension SwiftTest™, Dimension LoadTest™ and Dimension Focus™ software products.

The DWS Academy is designed for both new users, discovering the benefits of the Dimension product suite for the first time, and existing customers who are looking to brush up on some of the essentials.

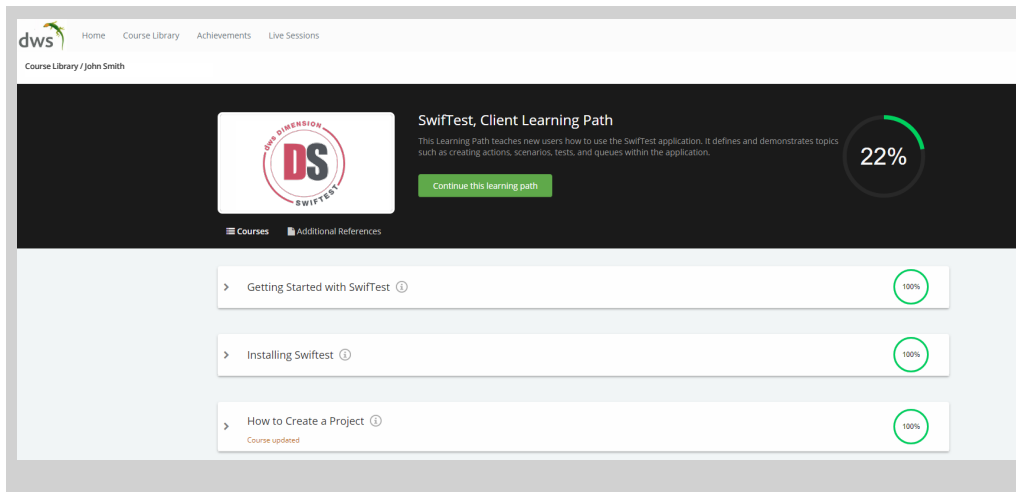

An intuitive dashboard provides an overview of your training curriculum, with details of the status of all scheduled, active and completed modules.

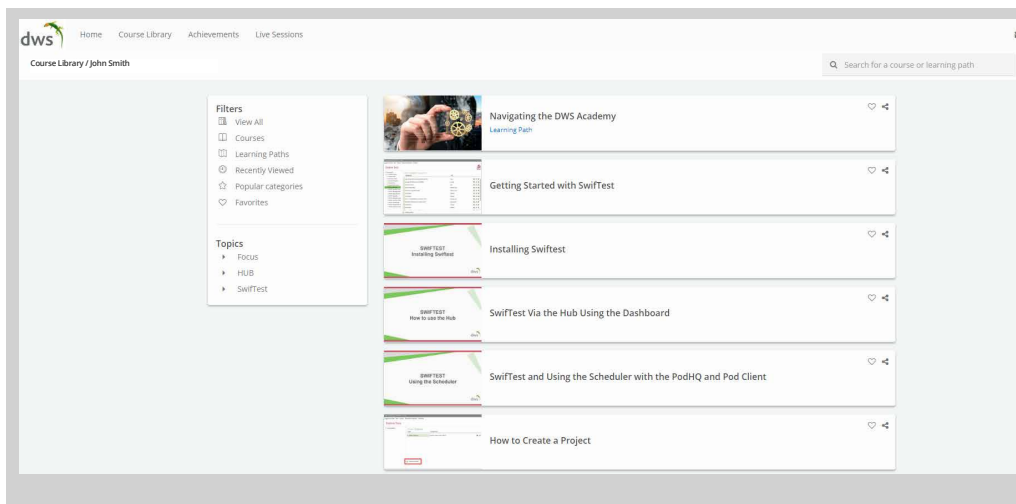

The platform features a number of pre-set learning paths, with modules delivered in a recommended order and curated for specific roles. Alternatively, users can opt for the course option and explore the training modules in any order.

The learning paths are designed to deliver distance learning in a logical order, guiding users through everything they need to become expert users of the SwiftTest, LoadTest and Focus software products.

The course library includes details of every available module; which includes a mix of video tutorials and downloadable support material. You can track your progress for each module online and review a list of your achievements over time.

The course curriculum is reviewed and updated regularly so ensure you check back for the latest content and insights to stay up-to-date.

“There simply wasn’t anyone other than DWS offering the type of solution we were looking for.”

Linda Sloan-Compton, Pinal County
